

Optirat GenII SOP - Using Standard Cage Components

The feeder has a hanger that interacts with the back-right hook within the cage.

Water Bottle

1. After filling, cap the bottles; twist the caps one-quarter turn to secure the cap and prevent leaks.
2. Hang the bottles on the water bottle hangers; do not hang a bottle on the feeder hanger.

To open the bottle, grasp the cap and twist firmly to help separate the cap from the seal.

Ensure the feeder and water bottle hooks fully interact with the cage features.
